

- *What is the usable and or effective capacity you need?*

We are seeking a storage array with a gross capacity of 47.04 TB – 13.44 TB SSD and 33.6 TB 10K drives. The usable and or effective capacity will be determined by the RAID type we choose for the array.

- *What IOPS and throughput numbers do you need to have as a minimum?*

We would expect to see a minimum IOPS of 50,000 from this array.

- *What are the workloads being put onto the array? Physical/Virtual, any File Services?*

The array supports the storage needs of our virtualized environment.
